Anna K. Swan, Ph.D.  
Associate Professor of Electrical and Computer Engineering,  
Physics, Materials Science and Engineering, and Photonics

## Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Unmodified band structure</b>	<b>3</b>
2.1	Graphene's lattice and Brillouin zone . . . . .	3
2.2	Tight binding motivation . . . . .	6
2.3	Tight binding in graphene . . . . .	8
2.3.1	Nearest neighbor tight binding . . . . .	8
2.3.2	Low energy approximation . . . . .	10
2.4	Dirac-Weyl electrons . . . . .	13
<b>3</b>	<b>Strain-induced vector potentials: Lattice-corrections and engineered pseudomagnetic fields</b>	<b>16</b>
3.1	Derivation of the pseudovector potentials . . . . .	17
3.1.1	Qualitative argument . . . . .	19
3.1.2	Strain altered lattice vectors . . . . .	21
3.1.3	Strain altered hopping energies . . . . .	23
3.1.4	Hamiltonian of strained graphene . . . . .	24
3.1.5	Pseudovector potentials . . . . .	26
3.2	Pseudovector potential discussion . . . . .	28
3.3	Pseudomagnetic fields . . . . .	32

3.3.1	Contribution of lattice-corrections to the pseudomagnetic field	33
3.3.2	Pressurized graphene sealed microchambers: pseudomagnetic field test bed . . . . .	34
3.3.3	Large, localized, plasmonically enhanced pseudomagnetic fields	39
3.3.4	The necessity of proper continuum modeling . . . . .	42
3.4	Conclusion . . . . .	47
<b>4</b>	<b>How graphene slides: Graphene’s anomalous macroscopic friction</b>	<b>50</b>
4.1	Raman G band strain response . . . . .	53
4.2	Experimental Design . . . . .	55
4.2.1	Pressure trapped in microchambers . . . . .	57
4.3	Qualitative results . . . . .	60
4.4	Continuum model of strain distributions . . . . .	64
4.4.1	Detailed derivation of the extended Hencky model . . . . .	68
4.4.2	Detailed description of the Atomistic model . . . . .	75
4.5	Fitting Raman spectra to the continuum model . . . . .	79
4.6	Measured frictional dependencies . . . . .	83
4.7	Summary . . . . .	86
<b>5</b>	<b>The thermal conductivity of strained graphene</b>	<b>88</b>
5.1	Past measurements of graphene’s thermal conductivity . . . . .	88
5.1.1	Theoretical background . . . . .	90
5.2	Heat transport model . . . . .	93
<b>6</b>	<b>Phonon induced band gap in graphene</b>	<b>100</b>
6.1	Theory . . . . .	100
6.1.1	Kekulé geometry . . . . .	101

6.1.2	Zone folding . . . . .	105
6.1.3	Altered hoppings . . . . .	109
6.1.4	Tight binding of the expanded Kekulé lattice . . . . .	111
6.2	Experimental design . . . . .	113
6.2.1	Phonon excitation . . . . .	113
6.2.2	Estimation of the band gap . . . . .	113
6.2.3	Band gap measurements . . . . .	116
<b>7</b>	<b>Conclusion</b>	<b>119</b>
<b>A</b>	<b>The first Brillouin zone of strained graphene</b>	<b>120</b>
<b>B</b>	<b>Slowly varying approximation</b>	<b>124</b>
<b>C</b>	<b>Global fitting algorithm</b>	<b>127</b>
<b>D</b>	<b>Hopping energies in the Kekulé geometry</b>	<b>143</b>
<b>E</b>	<b>Electrical transport experimental design</b>	<b>146</b>
	<b>Curriculum Vitae</b>	<b>162</b>

## List of Tables

4.1	Summary of the Grüneisen parameter and shear deformation potential as measured on different substrates . . . . .	81
-----	---	----

## List of Figures

2.1	Geometry of intrinsic graphene . . . . .	4
2.2	Electronic dispersion of intrinsic graphene . . . . .	11
3.1	Geometry of strained graphene . . . . .	20
3.2	Lattice-corrected strain-induced pseudovector potentials . . . . .	31
3.3	Pseudomagnetic fields in a pressurized, triangular, graphene sealed microchamber . . . . .	36
3.4	Effect of crystallographic orientation on the pseudomagnetic field . . . . .	38
3.5	Plasmonic enhancement in hourglass microchambers . . . . .	41
3.6	Large, localized pseudomagnetic fields in a pressurized, hourglass, graphene sealed microchamber . . . . .	43
3.7	Pseudomagnetic fields predicted by different continuum models . . . . .	45
3.8	Comparison of pseudomagnetic field calculated based on an atomistic model and based on the extended Hencky model . . . . .	48
4.1	Schematic of devices used to measure graphene's macroscopic friction . . . . .	52
4.2	Comparison of Raman spectra measured using circularly and linearly polarized light . . . . .	54
4.3	Beam waste determination . . . . .	56
4.4	Characteristic ambient pressure behavior of FLG sealed microchambers . . . . .	58
4.5	Qualitative observations of graphene sliding . . . . .	62

4.6	Discrimination of strain split Raman modes using linearly polarized light	63
4.7	Raman map of pressurized graphene sealed microchamber . . . . .	65
4.8	Continuum model of pressurized, graphene sealed, circular microcham- bers . . . . .	67
4.9	Forces acting on suspended, pressurized graphene . . . . .	70
4.10	Forces acting on supported, pressurized graphene . . . . .	72
4.11	Boundary conditions at the microchamber edge . . . . .	74
4.12	Numerical solutions to the continuum model . . . . .	76
4.13	Schematic diagram of the atomistic simulation . . . . .	77
4.14	Determination of the Grüneisen parameter and shear deformation po- tential . . . . .	80
4.15	Fit line scan spectra . . . . .	82
4.16	The dependencies of sliding friction for FLG . . . . .	84
4.17	The sliding friction for trilayer graphene . . . . .	85
5.1	Summary of the reported values of the room temperature thermal con- ductivity of monolayer graphene . . . . .	91
5.2	Expected temperature distribution in a graphene sealed microchamber heated by a centered laser . . . . .	99
6.1	Snapshots of the Kekulé phonon mode . . . . .	102
6.2	The geometry of the Kekulé lattice . . . . .	104
6.3	The zone foldings introduced by the Kekulé distortion . . . . .	106
6.4	Diagram of the hoppings in the expanded Kekulé unit cell . . . . .	107
6.5	Surface plots of the folded electronic dispersion of the Kekulé lattice .	109
6.6	Gapped electronic dispersion of the Kekulé lattice . . . . .	112
6.7	Neon scattering geometry . . . . .	114

6.8	Side view of a back gated graphene device. . . . .	117
A.1	The construction of the BZ for a hexagonal lattice . . . . .	122
C.1	Global fitting algorithm flow chart . . . . .	129
C.2	Global fit for microchambers with radii less than 1.5 microns . . . . .	133
C.3	Laser excitation profile overlaid on strain distribution . . . . .	135
C.4	Goodness of fit metric used to determine friction . . . . .	141
E.1	Circuit diagram for graphene electrical transport measurements . . . .	148
E.2	Simplified circuit diagram of four probe AC transport measurements .	149
